Smart Contract Engineer (Solidity)

Technology stac

Language (experienced)   : Solidity , Typescript , Java , html, css

Language (comprehend)   : C, C++, PHP, JQuery, Python

Development Suite   :   Truffle , remix , hardhat , ganache

Contract libraries   :   OpenZeppelin

API libraries   :   web3.js , ethers.js

Language I speak   :   Chinese , English

About Ethereum

1.Proficient in POW, POS, PPOS consensus algorithms, mainly work on the ethereum chain, have a deep understanding of EVM

2.Deployed a variety of ERC20 and ERC721 tokens in the market, such as Mintable, Burnable, Votes, Crowdsale, Whitelist, deflation ($safemoon), unlimited rise ($GRV)...

3.Decentralized project

AMM :   Uniswap
Staking&Dao :   Sushiswap
swapmining :   MDEX
insurance :   Cover protocal
Loan :   Compound
Aggregator :   1inch

About Myself

Software Engineering Institute of Guangzhou
B.S.

I am Chinese, with three years of software research experience and one year of blockchain development experience. I am very interested in the field of encryption, and gave up the previous Android development work to invest in the development of the blockchain field.

I have a lot of experience in the development of tokens and dex. If your needs are based on existing projects on the market, I can build them quickly, if it is a brand new project. I can also help you build according to the current security system (in the most cost-effective and safest way)
